Adamčík A. and Ripková S. (2008): New collections of *Flammulina rossica*. – Czech Mycol. 60(1): 113–121.

Two specimens from Germany and one from South Dakota, USA, were identified as *Flammulina rossica* during the examination of the München herbarium (M) material of the genus *Flammulina*. Micromorphological characters of these specimens are described and illustrated. The variability and delimitation of *F. rossica* is discussed and the knowledge of its distribution, ecology, morphology and biology is summarized.

Key words: fungi, Basidiomycota, *Xerulaceae*, distribution, morphology.

Adamčík A. a Ripková S. (2008): Ďalšie zbery druhu *Flammulina rossica*. – Czech Mycol. 60(1): 113–121.

Počas revidovania herbárového materiálu rodu *Flammulina* z Mníchova (M) sme dva zbery z Nemecka a jeden z Južnej Dakoty v USA určili ako *Flammulina rossica*. V práci uvádzame opis a vyobrazenie mikromorfologických znakov týchto zberov. Hodnotíme variabilitu a ohraničenie druhu *F. rossica* a sumarizujeme poznatky o jeho rozšírení, ekológii, morfológii a biológii.
