

## **New records of corticioid fungi in the Bohemian Forest (Czech Republic)**

Lucie Zíbarová, Václav Pouska  
Czech Mycology 72(2): 109–150, 2020

### **Electronic supplement**

List of all records of corticioid taxa made during the Silva Gabreta project, including data on their ecology. Vertical distribution is indicated by the number of plots where the species was recorded per elevation range. Data for host genus and decay stage are indicated by the number of objects on which the species was recorded (multiple records from the same object were excluded).

Legend: Abi – *Abies*, Acr – *Acer*, Aln – *Alnus*, Bet – *Betula*, blf – unidentified broadleaves, con – unidentified conifers, Cor – *Corylus*, Fag – *Fagus*, Frg – *Frangula*, Frx – *Fraxinus*, Lon – *Lonicera*, Pic – *Picea*, Pin – *Pinus*, Slx – *Salix*, Smb – *Sambucus*, Srb – *Sorbus*, uni – unidentified wood.
